

FFF Enterprises Makes FluMist® by MedImmune a Key Addition to Its Flu Vaccine Portfolio

PRESS RELEASE | February 7, 2011

FFF Enterprises, Inc., the nation's largest and most trusted distributor of plasma products, vaccines and critical-care biopharmaceuticals, has just announced the addition of FluMist® (Influenza Vaccine Live, Intranasal), an FDA-approved flu vaccine nasal spray manufactured by MedImmune, to its comprehensive portfolio of flu vaccines.

"We are very pleased to introduce FluMist, a live attenuated influenza vaccine, to our portfolio of inactivated influenza vaccine injectable products, rounding out our selection of products from the most respected manufacturers," said Patrick M. Schmidt, chief executive officer, FFF Enterprises, Inc.

FFF will be supplying FluMist on a wide contractual basis to its GPO partner members, as well as to consumers through community vaccinator, VaxAmerica, a program of FFF Specialty Pharmacy, NuFACTOR.

In 2010, the U.S. Centers for Disease Control and Prevention expanded their recommendations for annual influenza vaccination to include all people aged 6 months and older to get a seasonal flu vaccine. This flu season, healthcare providers can improve compliance by offering patients a shot in the arm, or a spray in the nose. FluMist is approved for eligible, healthy people between the ages 2 through 49.

"For most people, getting immunized against influenza is the easiest and most effective way to reduce their risk of infection," explains Schmidt. "By offering FluMist, healthcare providers can give patients more options and increase vaccination rates."

FluMist: Important Safety and Eligibility Information

What is FluMist (Influenza Vaccine Live, Intranasal)?

FluMist is a vaccine that is sprayed into the nose to help protect against influenza. It can be used in children, adolescents, and adults ages 2 through 49. FluMist may not prevent influenza in everyone who gets vaccinated.

Who should not get FluMist?

You should not get FluMist if you: are allergic to eggs, gentamicin, gelatin, or arginine; have ever had a life-threatening reaction to influenza vaccinations; or are 2 through 17 years old and take aspirin or medicines containing aspirin.

Children under 2 years of age should not get FluMist because there is a chance they may wheeze (difficulty with breathing) after getting FluMist.

Who may not be able to get FluMist?

Tell your healthcare provider if you: are currently wheezing; have a history of wheezing if under 5 years old; have had Guillain-Barré syndrome; have a weakened immune system or live with someone who has a severely weakened immune system; have problems with your heart, kidneys, or lungs; have diabetes; are pregnant or nursing; or are taking Tamiflu®, Relenza®, amantadine, or rimantadine.

They will decide if FluMist is right for you.

What are the most common side effects of FluMist?

The most common side effects of FluMist are runny or stuffy nose; sore throat and fever over 100°F. For more information, including complete Product and Patient Information, please visit www.FluMist.com.
